Digitized Facilities Management

# Grocery Solutions

## Asset Inventory, Tagging & Condition Assessment

Collect pertinent asset information (make, model, serial) and match the associated information with the tag that is applied for use in the CMMS Platform.

## Trust your Grocery facilities assets to a best-in-class company

- Data Fleet specializes in providing facilities management services to grocery equipment assets. Our staff is both knowledgeable in the equipment types and best practices surrounding collecting data, assessing equipment and efficiently tagging. Our teams consist of individuals skilled in different mechanical trades as well as general commercial inspectors who perform not only exercises like inventory and tagging but also full property/facility condition assessments up to and including providing cost breakouts. For a typical restaurant, this includes all of the refrigeration, cooking, mechanical and HVAC equipment. Each one of these asset types is broken down into further subtypes to allow for greater detail.
- Because consistency is critical in your business, this is a key reason why we have developed our own internal data collection and analysis software application tools supported by an in-house development staff to capture the information from the field. Our Property Echo tool is a mobile application which ensures that all information is captured, including imagery, which is then quality controlled through AI processes as well as randomized manual reviews.
- Data Fleet has developed and utilizes a set of OCR tools which are able to recognize manufacturing rating plates to ensure the collection of core information like make, model, serial and other data points are accurate. All Data Fleet staff are trained in applying the tools and our proven process ensuring consistency and competency. Many others use manual collection in the field up to and including filling in spreadsheets or word document forms. This creates another layer of data processing and potential transcription errors which our process and tools eliminate.
- Data Fleet has decades of experience in not only collecting data in the field, but also has an excellent understanding of the caveats of collecting the data. Since grocery facilities typically have a large number of sites, any data collection process of this magnitude will run into issues, and anyone saying that the process will be perfect in every way is simply exposing their inexperience. Data Fleet knows the complexity with running large field teams and has the expertise to ensure that any issue is minimized to the smallest degree. We ensure that not only is the data collected consistent and correct, but that the entire process surrounding that is carefully managed to avoid disruption of business and to create a partnership with you and your team in getting your data successfully up and running and integrated into your CMMS platform.

## Total Grocery Solutions Professional Services Offering

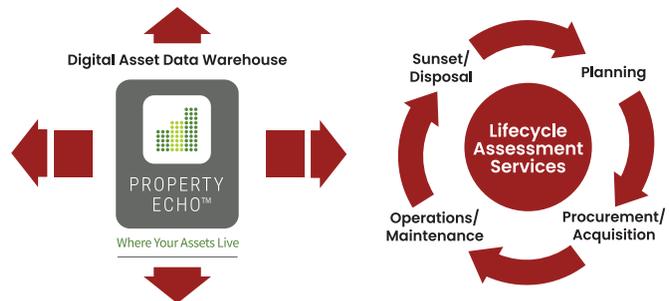

- Customer Facility
- Customer Facility
- Customer Facility

### ON-SITE FIELD SERVICES

- Inventory
- Photo & Digital Twin Spatial Capture
- Condition Assessment
- Tagging

### PORTAL APPLICATION SERVICES

- Asset Registry
- 3D Virtual
- Reporting
- Predictive Maintenance & Capital Planning

### CMMS INTEGRATION SERVICES

- Data conversions to confirm to CMMS Application Modules
- Match asset tag data names to conform/align to standard CMMS asset app identifier names or configure to match one to one
